SUBJECT INDEX
VOLUME 58

Acquired immune deficiency syndrome
  HTLV-III/LAV infection of chimpanzees, 116
  retrovirus endonuclease protein serum antibodies, 9
Adenoviruses
  avian and human adenoviruses virus-associated RNA characterization, 600
  human adenovirus type 12 posttranslational tumor antigen modification at N terminus, 592
Adenovirus type 5
  hepatitis B virus novel RNA family helper-free vector, 554
Adenovirus type 12
  E1A gene mitogenic activity in rat cells cellular DNA synthesis, 125
    effect of dexamethasone, 125
    induction by hormones, 125
  tumor antigen posttranslational modification at N terminus, 592
Aedes albopictus
  Sindbis virus infection homologous interference, 81
African swine fever virus
  field isolates and cell culture strain antigenic differences, 385
  monoclonal antibodies binding properties, 385
  structural proteins localization by immunoelectron microscopy, 377
  Vero cell line
    effect of NH_4Cl, 676
    establishment and maintenance of infection, 676
    virus production, 676
Agnoprotein
  simian virus 40 frameshift insertion, 165
    spontaneous deletion mutants, 165
AIDS-associated retrovirus
  endonuclease protein from *pol* gene serum antibodies, 9
Antibodies
  hepatitis B virus surface proteins serologic markers in chimpanzee model, 522
Antigenic determinants
  Rift Valley fever virus bacterial expression cloning, 263
Antigenic variation
  African swine fever virus field isolates and cell culture strain, 385
Antigens
  canine distemper virus immunization with fusion protein, 536
  early antigen synthesis in Raji cells induction by 12-*O*-tetradecanoylphorbol-13-acetate and sodium butyrate, 671
  Epstein-Barr virus expression in COS-1 cells, 324
  hepatitis B virus surface proteins serologic markers in chimpanzee model, 522
  polyomavirus middle-T antigen binding to DNA cellulose, 157
    effect of protein kinase C, 239
    phosphorylation stimulation by TPA, 239
  simian virus 40 large T identification of antigenic determinants, 635
Antigen-specific reaction
  cytomegalovirus human lymphocyte responses, 909
Antigen-specific suppressor factors
  herpes simplex virus regulation of immunity, 331
Attachment
  human rhinoviruses receptor protein isolation, 290
Attachment site
  B. subtilis temperate phage ϕ105 location of *attP*, 223
Attenuation phenotype
  type 1 poliovirus construction of cDNA clones, 348
Avian adenoviruses
  virus-associated RNAs characterization, 600
Avian erythroblastosis virus
  v-*erbB* oncogene site-directed mutagenesis, 542
    structural domains, 542
Avian retrovirus
  nuclease mechanism of pp32 endonuclease, 970
Avian sarcoma and leukemia viruses
  gag precursor polyproteins of p2 region purification, 50
    structure and processing, 50

Bacillus subtilis temperate bacteriophage ϕ105
  attP attachment site location, 223
Bacteriophages
  bacteriophage Cp-1 terminal protein complex with 5′-dAMP, 31
  bacteriophage G4 DNA sequence requirements, 450
    origin of complementary-strand DNA synthesis, 450
  bacteriophage ϕ6 small double-stranded RNA nucleotide sequence, 142
    translational control mechanism, 142
  bacteriophage T4 DNA end structure and mechanism of packaging, 951
  B. subtilis temperate phage ϕ105 *attP* attachment site location, 223
  λ*se* mutations expression in *Escherichia coli*, 835
Baculoviruses
  A. californica nuclear polyhedrosis virus amino acid substitution, 684
    assembly of polyhedra, 684
    point mutation, 684
BK virus
  human embryonic kidney cells transformation by a combination of virus and Harvey-*ras* oncogene, 680
B lymphocytes
  activation by Epstein-Barr virus/C3d complement receptor, 709
B lymphoproliferation
  Epstein-Barr virus clonal origins of disease, 975
Bovine herpesvirus 1
  heterogeneity at genomic terminus short tandem repeat, 43
Bovine papillomavirus 1
  intracellular chromatin properties nuclease-hypersensitive region mapping, 500
Bovine rotavirus
  identification of RNA-binding proteins, 561
Brain cell differentiation
  guinea pig cytomegalovirus susceptibility of fetal cell cultures, 960

Caliciviruses
  Snow Mountain agent of viral gastroenteritis resemblance of biophysical properties and structural protein, 487
Canine distemper virus
  immunization with fusion protein protection, 536
  matrix genes cloning, 408
    nucleotide and amino acid homology, 408
Caprine arthritis encephalitis virus
  nucleotide sequence homology visna virus, 665
Capsid
  packaging limit in simian virus 40 deletion formation, 393
Carrier state
  curing in minute virus of mice intracellular block of replication, 26
    virus-resistant cell selection, 26
Cervical carcinoma
  cloning and characterization of cellular DNA human papillomavirus type 16, 979
Cervical dysplasia
  human papillomavirus isolation DNA cloning and characterization, 225
Chimpanzees
  infection with HTLV-III/LAV model for AIDS, 116
Chloramphenicol acetyltransferase (CAT) gene
  stimulation of expression murine cytomegalovirus pp89, 59
Chromatin
  minute virus of mice similarity to structure of nucleoprotein complexes, 817
  properties and nuclease-hypersensitive region mapping bovine papillomavirus 1, 500
Complementary-strand DNA
  bacteriophage G4 origin of synthesis sequence requirements, 450
Coronaviruses
  selection of antigenic variants with monoclonal antibodies pathogenicity of murine coronavirus JHM, 869
Cytomegaloviruses

effects on human lymphocyte responses, 909
guinea pig cytomegalovirus
susceptibility of fetal brain cell types, 960
human cytomegalovirus
immediate-early expression in rat cells, 851
major early DNA-binding protein
identification and characterization, 253
Cytomegalovirus, human
envelope gp55-116 complex
synthesis and processing, 185
envelope proteins
immune response of guinea pigs, 661
human teratocarcinoma cells
DNA replication, 434
immediate-early gene product expression, 434
Cytomegalovirus, simian
human teratocarcinoma cells
DNA replication, 434
immediate-early gene product expression, 434
Cytoplasm
La Crosse virus
small genome mRNA synthesis, 647
Cytoplasmic transcripts
parvovirus H-1
high-resolution nuclease mapping, 271

Deletion formation
simian virus 40 replication
influence of packaging limit of capsid, 393
Deletion mutants
Sendai virus defective interfering
sequences regulating RNA replication and transcription, 578
Dexamethasone
adenovirus type 12 E1A gene in rat cells
effect on mitogenic activity, 125
DNA
end structure and mechanism of packaging
bacteriophage T4, 951
Epstein-Barr virus heterogeneous genomes
palindromic structure and polypeptide expression, 475
herpes simplex virus type 2
large palindromic replication origin, 513
Marek's disease virus
amplification of tandem direct repeat, 657
polyomavirus
effect of duplicated polyadenylation signal on polyadenylation or termination efficiency, 733
simian virus 40 large T antigen mutants
replication and transformation functions, 526
structure of nucleoprotein complexes
minute virus of mice, 817
DNA binding
simian virus 40
allosteric effects on T antigen activity, 765
DNA-binding protein
cytomegalovirus
identification and characterization, 253
DNA cellulose
polyomavirus middle-T antigen binding, 157
DNA hybridization
human papillomavirus type 16 from cervical carcinoma
cloning and characterization, 979
DNA hybridization probes
chromosomal locations of human retroviral genomes, 955
DNA polymerase
induction in Raji cells
early viral protein, 671
properties, 671
DNA replication
A. californica nuclear polyhedrosis virus
amino acid substitutions, 684
assembly of polyhedra, 684
point mutation, 684
sequence alterations, 684
DNA sequences
herpes simplex virus type 1
generation of inverting mutant, 583
pseudorabies virus glycoprotein gene
homology with herpes simplex virus types 1 and 2 glycoprotein C, 339
vaccinia virus
localization of gene encoding envelope antigen, 757
DNA synthesis
induction of Epstein-Barr virus nuclear antigens, 988
Double-stranded RNA
Saccharomyces cerevisiae virus
conserved regions, 402
sequencing of defective interfering RNAs, 402
Duck hepatitis B virus
primary duck hepatocyte infection
viral replication in vitro, 17
Duck hepatocytes
infection with duck hepatitis B virus
viral replication in vitro, 17

Early mRNAs
JC virus
isolation and 5′ terminal mapping, 651
Encephalitis
Sindbis virus infection in mice
immunotherapy, 107
Envelope proteins
human cytomegalovirus
immune response of guinea pigs, 661
isolation and characterization, 661
synthesis and processing, 185
Epidermodysplasia verruciformis
human papillomavirus B
comparative analysis of nucleotide sequence, 626
genomic sequence, 626
Epithelial cells
herpes simplex virus type 2
glycoprotein expression, 689
Epstein-Barr virus
C3d complement receptor of human B lymphocytes
antigenic and ligand-binding properties of purified protein, 709
purification, 709
characterization of early antigen component, 748
clonal origins of B-lymphoproliferative disease, 975
heterogeneous DNA genomes
palindromic structure and polypeptide expression, 475
human B-cell transformation
lysis by stimulated human T cells, 179
superinfection with varicella-zoster virus, 179
induction of cytoplasmic filamentous protein, 748
induction of nuclear antigens, 988
latent infection membrane protein
orientation and patching, 233
nuclear antigen
deletion mutant, 324
expression in COS-1 cells, 324
gene transfer with simian virus 40 vectors, 324
Raji cells
enzyme activity, 671
T-cell response to membrane protein
leukocyte migration inhibition tests, 230
Erythrocyte membranes
interaction with Sendai virus
analysis of binding and fusion, 87
membrane fusion assay, 87
Escherichia coli
λ*se* mutations
expression, 835
Escherichia coli plasmids
herpes simplex virus type 2
replication origin, 513

Feline leukemia virus
envelope gene and long terminal repeat
nucleotide sequences, 825
recombinational origin of subgroup B viruses, 825
Fibroblasts
transformation
MH2 avian retrovirus mutant, 134
Foot-and-mouth disease virus
localization of a second viral protease, 893
Friend murine leukemia virus
BALB/c mouse cell lines
H-2-linked control of retrovirus production, 782
Frog virus 3
temperature-sensitive mutants
biochemical and genetic analysis, 192
phenotypic classification, 192
Fusion
Sendai virus-erythrocyte membrane
quantitative and kinetic analysis, 87

gag precursor polyproteins
avian sarcoma and leukemia virus p2 region
purification, 50
structure and processing, 50
Gastroenteritis
Snow Mountain agent
purification and characterization by radioimmunoassay, 487
Glycoprotein C
herpes simplex virus type 1
expression and regulation, 367
properties of clonal L-cell line, 367

herpes simplex virus type 2 mutants
pathogenicity in mice, 36
Glycoprotein, nonessential
pseudorabies virus
characterization and mapping, 173
isolation, 173
Glycoproteins
homology between pseudorabies virus and herpes simplex virus types 1 and 2
DNA sequencing, 339
mRNA characterization, 339
Guinea pig cytomegalovirus
susceptibility of fetal brain cell types, 960

Harvey-*ras* oncogene
combination with BK virus
transformation of human enbryonic kidney cells, 680
Hepadnaviruses
woodchuck and chimpanzee models
peripheral blood lymphocytes, 1
Hepatitis A virus
virion structure
peptide mapping of capsid region, 307
Hepatitis B virus
cellular location of surface antigen
assembly and packaging, 884
infected chimpanzees
peripheral blood lymphocytes, 1
novel RNA family structure
expression with a helper-free adenovirus vector, 554
surface proteins
serologic markers in chimpanzee model, 522
Hepatitis delta virus
purification of delta antigen and hepatitis B virus-derived envelope protein composition, 945
Herpes simplex virus
cell-mediated immunity
antigen-specific suppressor factors, 331
regulation, 331
homology of glycoprotein gene with pseudorabies virus
DNA sequencing, 339
mRNA characterization, 339
insertion mutants
duplication of sequences, 704
recombination-enhancing elements, 704
resistance in newborn mice
genetic control, 152
Herpes simplex virus type 1
BALB/c and C57BL/6 mice
regulation of interferon production by *If* loci, 743
generation of inverting mutant
DNA sequences, 583
origin of DNA replication, 583
glycoprotein C gene
expression and regulation, 367
properties of clonal L-cell line, 367
glycoprotein C-negative mutant phenotypes
molecular basis, 281
monoclonal antibody selection, 281
identification of protein specified by diploid gene, 843
wild-type strain KOS
functional and molecular analysis, 203
neuroinvasiveness, 203
Herpes simplex virus type 2
infected epithelial cells
glycoprotein localization, 689
no glycoprotein C expression
pathogenicity in mice, 36
replication in mice, 36
ori_{L2} cloning and characterization
DNA sequence analysis, 513
replication origin, 513
Herpesviruses
Epstein-Barr virus
characterization of early antigen components, 748
induction of cytoplasmic filamentous protein, 748
induction of nuclear antigens, 988
Homologous interference
Sindbis virus infection of *A. albopictus*, 81
Human adenoviruses
virus-associated RNAs
characterization, 600
Human adenovirus type 12
tumor antigen
posttranslational modification at N terminus, 592
Human cytomegalovirus
envelope gp55-116 complex
synthesis and processing, 185
envelope proteins
immune response of guinea pigs, 661
human teratocarcinoma cells
DNA replication, 434
immediate-early gene product expression, 434
immediate-early expression in rat cells, 851
Human embryonic kidney cells
transformation to anchorage independence by BK virus and Harvey-*ras* oncogene, 680
Human endogenous retroviruses
molecular cloning and long terminal repeat sequencing, 937
Human papillomavirus
isolated from human genital tumors
identification of tandem duplication in noncoding region
physical state of the DNA, 963
isolation from genital tract lesion
DNA cloning and characterization, 225
Human papillomavirus type 8
comparative analysis of nucleotide sequence, 626
genomic sequence, 626
Human papillomavirus type 16
cloning of cellular DNA from cervical carcinoma
nucleotide sequence, 979
Human papillomavirus type 33
cervical cancer isolate
nucleotide sequence, 991
Human parvovirus B19
nucleotide sequence and genome organization of pathogenic isolate, 921
Human rhinoviruses
attachment to susceptible cells
receptor protein isolation, 290
Human T-cell leukemia virus type I
frequent partial deletion of proviruses
pattern and mechanism of deletion, 508
Human T-cell lymphotropic virus type III
nucleotide sequence homology with visna virus, 665
Human T-lymphotropic virus type III/lymphadenopathy-associated virus
infection of chimpanzees
model for AIDS, 116

Immediate-early protein
murine cytomegalovirus
CAT gene expression, 59
trans activation of gene expression, 59
Immune response
human cytomegalovirus envelope proteins
guinea pigs, 661
Influenza A virus
infected pilot whale
comparison with influenza virus from gulls, 655
isolation and characterization, 655
Influenza virus
mouse chromosome 16
localization of resistance gene *Mx*, 967
Insertion mutants
herpes simplex virus
duplication of sequences, 704
recombination-enhancing elements, 704
Interferon
production in BALB/c and C57BL/6 mice
structural genes versus *If* loci, 743
Iridoviridae
frog virus 3 *ts* mutants
biochemical and genetic analysis, 192
phenotypic classification, 192

JC virus
early mRNAs
isolation and 5′ terminal mapping, 651
mapping of late RNA 5′ termini, 216
S1 nuclease analysis, 216

La Crosse virus
small genome mRNA
cytoplasmic synthesis site, 647
Large T antigen
simian virus 40
identification of antigenic determinants, 635
simian virus 40 mutants
replication and transformation functions, 526
Large tumor antigen
polyomavirus
mapping of phosphorylation sites, 805
Late leader region
polyomavirus
spacer function, 417
Latent infection
Epstein-Barr virus
membrane protein orientation, 233
membrane protein patching, 233
T-cell response to membrane protein, 230
Lentiviruses
nucleotide sequence homology

caprine arthritis encephalitis virus and visna virus, 665
visna-maedi virus from sheep
tropism for monocytes, 67
Leukocyte migration inhibition tests
Epstein-Barr virus
T-cell response to membrane protein, 230
Lymphomas
CWD mice
murine leukemia virus, 314

Macrophages
maturation from monocytes in sheep
effect on visna virus replication, 67
temperature-induced transformation
MH2 avian retrovirus mutant, 134
Mahoney type 1 poliovirus
cDNA clones
genetic analysis of attenuation phenotype, 348
Major histocompatibility complex
TL locus in mice
retroviruslike sequence isolation, 296
Marek's disease virus
DNA virus
amplification of tandem direct repeat, 657
Matrix genes
measles and canine distemper viruses
cloning, 408
nucleotide and amino acid homology, 408
Matrix protein
vesicular stomatitis virus
binding to ribonucleocapsids, liposomes, and monoclonal antibodies, 860
Measles virus
matrix genes
cloning, 408
nucleotide and amino acid homology, 408
Meningoencephalitis
mumps virus
protection by monoclonal antibodies, 220
MH2 avian retrovirus
temperature-sensitive mutant
effect on fibroblast transformation, 134
effect on macrophage transformation, 134
Mice
BALB/c and C57BL/6 strains
regulation of interferon production by *If* loci, 743
Friend murine leukemia virus
H-2-linked control of production, 782
herpes simplex virus type 2 mutant
pathogenicity and replication, 36
influenza virus resistance gene *Mx*
localization on mouse chromosome 16, 967
major histocompatibility complex TL locus
retroviruslike sequence isolation, 296
minute virus of mice
curing of carrier state, 26
mouse mammary tumor virus
alteration of cellular genetic loci, 619
mouse mammary tumor virus *Mtv-2*
transfer
selective breeding, 247
murine leukemia virus
phenotype and genotype, 314
spontaneous lymphomas, 314
murine leukemia virus *env*-related segments
xenotropic and mink cell focus-forming hybridization probes, 359
polyomavirus
cross-linking of attachment protein to mouse kidney cell receptor, 773
primary brain astrocytes
reduced pathogenicity and restricted replication of mouse hepatitis virus B59 mutants, 426
radiation leukemia virus variants
molecular cloning studies, 96
Sindbis virus encephalitis
immunotherapy, 107
T-cell leukemia cells
mouse mammary tumor virus protein product expression, 441
vesicular stomatitis virus mutant
tumorigenicity, 914
Mice, newborn
genetically controlled resistance
herpes simplex virus, 152
murine cytomegalovirus, 152
Mink cell focus-forming-related murine leukemia virus
env segments
differentiation probes, 359
Minute virus of mice
curing of carrier state
intracellular block of replication, 26
virus-resistant cell selection, 26
procaryotic expression vector
nonstructural protein sequence, 724
structure of nucleoprotein complexes, 817
Mitogenic activity
adenovirus type 12 E1A gene in rat cells
effect of dexamethasone, 125
induction by hormones, 125
Moloney murine leukemia virus
L-cell receptor
solubilization and characterization, 900
Monoclonal antibodies
African swine fever virus
localization of structural proteins by immunoelectron microscopy, 377
analysis of binding properties
African swine fever virus isolates, 385
bovine papillomavirus 1 clones
detection of intracellular chromatin properties, 500
Epstein-Barr virus
induction of early antigen components, 748
Epstein-Barr virus/C3d complement receptor
purification and properties in human B lymphocytes, 709
fusion protein of mumps virus
protection against encephalitis, 220
herpes simplex virus type 2
glycoprotein expression, 689
murine coronavirus JHM
pathogenicity of antigenic variants, 869
rotaviruses
protection against diarrhea, 700
surface proteins vp3 and vp7, 700
simian virus 40
identification of antigenic determinants, 635
Sindbis virus encephalitis in mice, 107
Monocytes
maturation to macrophages in sheep
effect on visna virus replication, 67
Morbilliviruses
canine distemper virus
immunization with fusion protein, 536
Mosquito cells
Sindbis virus infection
homologous interference, 81
Mouse brain astrocytes
mouse hepatitis virus B59 temperature-sensitive mutants
reduced pathogenicity and restricted replication, 426
Mouse hepatitis virus
temperature-sensitive mutants
reduced pathogenicity and restricted replication in mice, 426
Mouse mammary tumor virus
long terminal repeat region
protein product expression in mouse T-cell leukemia cells, 441
selective breeding of mice
Mtv-2 provirus transfer, 247
tumorigenesis in feral mouse colony
alteration of cellular genetic loci, 619
mRNA
polyomavirus
effect of duplicated polyadenylation signal on polyadenylation or termination efficiency, 733
pseudorabies virus glycoprotein gene
homology with herpes simplex virus types 1 and 2 glycoprotein C, 339
Mumps virus
fusion protein
brain necrosis pathogenesis, 220
necrotizing meningoencephalitis
protection by monoclonal antibodies, 220
Murine coronavirus JHM
selection of antigenic variants with monoclonal antibodies
pathogenesis, 869
Murine cytomegalovirus
immediate-early phosphoprotein pp89
CAT gene expression, 59
trans activation of gene expression, 59
resistance in newborn mice
genetic control, 152
Murine leukemia virus
env-related segments
xenotropic and mink cell focus-forming hybridization probes, 359
lymphomas in CWD mice
phenotype and genotype, 314
Mus cervicolor popaeus
mouse mammary tumor virus
alteration of cellular genetic loci, 619
Mutations
λ*se* expression in *Escherichia coli*, 835
temperature-sensitive transformation and back mutations in Rous sarcoma virus
cloning and sequencing, 694
localization in v-*src* gene, 694

Mycoviruses
Saccharomyces cerevisiae virus
conserved regions, 402
sequencing, 402

Neoplasias
female genital tract
human papillomavirus 31, 225
Neuroadapted Sindbis virus
encephalitis in mice
immunotherapy, 107
monoclonal antibody cure and prophylaxis, 107
Neuroinvasiveness
herpes simplex virus type 1
wild-type strain KOS, 203
Neutralization
herpes simplex virus type 1
glycoprotein C-negative mutant phenotypes, 281
Newcastle disease virus
BALB/c and C57BL/6 mice
regulation of interferon production by *If* loci, 743
Nonessential glycoprotein
pseudorabies virus
characterization and mapping, 173
isolation, 173
Nuclear polyhedrosis virus
A. californica
amino acid substitution, 684
assembly of polyhedra, 684
point mutation, 684

Oncogenes
site-directed mutagenesis of v-*erbB* protein
avian erythroblastosis virus, 542

Papillomaviruses
bovine type 1
intracellular chromatin properties, 500
mapping of nuclease-hypersensitive regions, 500
epidermodysplasia verruciformis-associated human papillomavirus B
comparative analysis of nucleotide sequence, 626
genomic sequence, 626
human papillomavirus type 16
cloning of cellular DNA from cervical carcinoma, 979
human papillomavirus type 33
nucleotide sequence of cervical cancer isolate, 991
human papillomavirus types 6 and 11
tandem duplication in noncoding region, 963
Papovaviruses
human papillomavirus type 33
nucleotide sequence of cervical cancer isolate, 991
Paramyxovirus
Sendai virus defective interfering deletion mutants
sequences regulating RNA replication and transcription, 578
Parvoviruses
human parvovirus B19
nucleotide sequence and genome organization, 921
minute virus of mice
nonstructural protein sequence, 724
structure of nucleoprotein complexes, 817
Parvovirus H-1
cytoplasmic transcript mapping, 271
identification of promoters
DNA cell-free transcription, 271
Peripheral blood lymphocytes
woodchuck and chimpanzee models
hepadnavirus infection, 1
Phleboviruses
Rift Valley fever virus
G2 glycoprotein antigenic determination, 263
Phorbol ester
mouse mammary tumor virus
protein product expression in mouse T-cell leukemia cells, 441
Phosphoprotein mRNA
vesicular stomatitis virus
internal initiation of translation, 797
Phosphorylation
polyomavirus middle-T antigen
stimulation by TPA, 239
Picornaviruses
foot-and-mouth disease virus
localization of a second viral protease, 893
poliovirus type 1 alkali-dissociated procapsids
14S subunit biological activity and electron microscopy, 610
Pilot whale
influenza A virus
comparison with influenza virus from gulls, 655
isolation and characterization, 655
Plasmids
ori_{L2} cloning and characterization
herpes simplex virus type 2, 513
Polioviruses
anti-VPg antibody precipitation of product RNA
mediation by VPg linked to template RNA, 715
polymerase synthesis, 715
dimeric RNA synthesis by replicase
mechanisms of production, 459
host-factor-dependent replicase reaction
anti-VPg antibodies, 212
RNA synthesis, 212
use of in vitro transcription system
RNA synthesis, 790
Poliovirus, type 1
cDNA clones
genetic analysis of attenuation phenotype, 348
procapsid-derived 14S particles
biological activity and electron microscopy, 610
Polyomaviruses
duplication of functional polyadenylation signals
effect on polyadenylation and transcription termination, 733
large tumor antigen
mapping of phosphorylation sites, 805
late leader region
spacer function, 417
middle-T antigen
binding to DNA cellulose, 157
effect of protein kinase C, 239
heterogeneity, 157
phosphorylation stimulation by TPA, 239
mouse kidney cell receptor
cross-linking of virus attachment protein, 773
Poxviruses
vaccinia virus
gene expression during viral lytic cycle, 569
localization of gene encoding envelope antigen, 757
protein synthesis in infected cells, 569
Product RNA
anti-VPg antibody precipitation
synthesis by poliovirus polymerase, 715
Promoters
JC virus
mapping of late RNA 5′ termini, 216
parvovirus H-1
identification by DNA cell-free transcription, 271
Proviruses
human T-cell leukemia virus type I
pattern and mechanism of frequent partial deletion, 508
Pseudomonas phaseolicola
bacteriophage ϕ6 small double-stranded RNA
nucleotide sequence, 142
translational control mechanism, 142
Pseudorabies virus
homology of glycoprotein gene with herpes simplex virus types 1 and 2 glycoprotein C
DNA sequencing, 339
mRNA characterization, 339
nonessential glycoprotein
characterization and mapping, 173
isolation, 173
$p60^{src}$ tyrosine protein kinase activity
membrane binding effect of myristyl group
Rous sarcoma virus mutants, 468

Radiation leukemia virus
emergence in C57BL/Ka mice
molecular cloning studies, 96
Raji cells
Epstein-Barr virus-specific DNA polymerase
expression of early antigens, 671
Rat cells
human cytomegalovirus
immediate-early expression by protein synthesis inhibition, 851
Rats
adenovirus type 12 E1A gene
mitogenic activity, 125
reactivity of free and chromosomal-bound large T antigen complexes, 635
Receptor protein
human rhinoviruses
isolation, 290
Recombinant murine leukemia virus
lymphomas in CWD mice
phenotype and genotype, 314
Replicase
dimeric RNA synthesis
poliovirus, 459
Replicase reaction
poliovirus

anti-VPg antibodies, 212
RNA synthesis, 212
Replication
duck hepatitis B virus
duck hepatocyte culture infection, 17
Reticuloendotheliosis virus
DNA insertion in strain T
subgenomic mRNA reduction, 75
transformation suppression, 75
Retroviruses
AIDS-associated retrovirus
endonuclease protein, 9
serum antibodies, 9
avian erythroblastosis virus
v-*erbB* oncogene site-directed mutagenesis and structural domains, 542
avian retrovirus
nuclease mechanism of pp32 endonuclease, 970
feline leukemia virus, subgroups A and B
sequences of envelope gene and long terminal repeat, 825
Friend murine leukemia virus
H-2-linked control of production, 782
homology between lentiviruses
caprine arthritis encephalitis virus, 665
visna virus, 665
human endogenous retrovirus genes
molecular cloning and long terminal repeat sequencing, 937
human proviral genomes
chromosomal locations, 955
human T-cell leukemia virus type I
pattern and mechanism of frequent partial deletion of proviruses, 508
Moloney murine leukemia virus
characterization of L-cell receptor, 900
mouse mammary tumor virus
alteration of cellular genetic loci, 619
squirrel monkey retrovirus nucleotide sequence
novel primer-binding site for $tRNA^{Lys}_{1,2}$, 983
Retroviruslike sequence
murine major histocompatibility complex TL locus
isolation and hybridization, 296
Rhabdoviruses
vesicular stomatitis virus phosphoprotein mRNA
internal initiation of translation, 797
vesicular stomatitis virus temperature-sensitive mutant
pathogenic effect of virus-host interactions, 493
virulence in neural and nonneural cells, 493
Rhinoviruses, human
attachment to susceptible cells
receptor protein isolation, 290
Rift Valley fever virus
G2 glycoprotein antigenic determinants
bacterial expression cloning, 263
monoclonal antibodies, 263
RNA
hepatitis B virus family structure
expression in human cells, 554
poliovirus replicase
mechanism of synthesis, 459
transcription, processing, and stability in polyomavirus
function of late leader region, 417
RNA-binding proteins
bovine rotavirus
protein identification, 561
RNA polymerase
anti-VPg antibody precipitation of product RNA
poliovirus synthesis, 715
RNA synthesis
poliovirus transcription system, 790
RNA transcription
virus-associated characterization
human and avian adenoviruses, 600
Rotaviruses
bovine rotavirus
RNA-binding proteins, 561
monoclonal antibodies against surface proteins
protection against diarrhea, 700
Rous sarcoma virus
effects of temperature-sensitive mutations
intracellular localization and processing of $pp60^{v\text{-}src}$ proteins, 876
$p60^{src}$ tyrosine protein kinase activity
membrane binding effect of myristyl group, 468
transformation by mutant viruses, 468
temperature-sensitive transformation and back mutations
cloning and sequencing, 694
localization in v-*src* gene, 694

Sabin type 1 poliovirus
cDNA clones
genetic analysis of attenuation phenotype, 348
Saccharomyces cerevisiae virus
defective interfering double-stranded RNAs
conserved regions, 402
sequencing, 402
Selective breeding
mouse mammary tumor virus *Mtv-2* transfer
hybrid wild mouse line, 247
Sendai virus
BALB/c and C57BL/6 mice
regulation of interferon production by *If* loci, 743
defective interfering deletion mutants
sequences regulating RNA replication and transcription, 578
interaction with erythrocyte membranes
analysis of binding and fusion, 87
membrane fusion assay, 87
Simian cytomegalovirus
human teratocarcinoma cells
DNA replication, 434
immediate-early gene product expression, 434
Simian rotavirus SA11
monoclonal antibodies against surface proteins
protection against diarrhea, 700
Simian virus 40
agnogene frameshift insertion
spontaneous deletion mutants, 165
deletion formation during replication
influence of packaging limit of capsid, 393
gene transfer
COS-1 cells, 324
Epstein-Barr virus antigen expression, 324
large T antigen mutants
replication and transformation functions, 526
T antigen DNA binding
allosteric control, 765
Sindbis virus
encephalitis in mice
immunotherapy, 107
monoclonal antibody cure and prophylaxis, 107
infection of *A. albopictus* cells
homologous interference, 81
Snow Mountain agent
viral gastroenteritis
comparison with Norwalk virion, 487
purification and characterization by radioimmunoassay, 487
Squirrel monkey retrovirus
novel primer-binding site for $tRNA^{Lys}_{1,2}$
nucleotide sequence analysis, 983
Streptococcus pneumoniae
bacteriophage Cp-1 terminal protein complex with 5′-dAMP, 31
Structural proteins
African swine fever virus
localization by immunoelectron microscopy, 377
Subgenomic mRNA
reticuloendotheliosis virus strain T
effect of DNA insertion, 75
transformation suppression, 75
Superinfection
varicella-zoster virus
transformed human B cells, 179

Tandem repeats
bovine herpesvirus 1
heterogeneity at genomic terminus, 43
Temperature-sensitive mutants
mouse hepatitis virus A59
reduced pathogenicity and restricted replication in mice, 426
vesicular stomatitis virus infection in neural and nonneural cells
characterization of persistently infected cells, 493
pathogenic effect of virus-host interaction, 493
Temperature-sensitive mutations
intracellular-localization and processing of $pp60^{v\text{-}src}$ proteins
Rous sarcoma virus, 876
Teratocarcinoma cells
DNA replication and immediate-early gene product expression, 434
human and simian cytomegaloviruses, 434
12-*O*-Tetradecanoylphorbol-13-acetate
polyomavirus middle-T antigen phosphorylation stimulation, 239
Thymidine kinase gene
identification of protein specified by diploid gene
herpes simplex virus type 1, 843
tRNA
novel primer-binding site
squirrel monkey retrovirus nucleotide sequence, 983
Tumor antigen

human adenovirus type 12
posttranslational modification at N terminus, 592
simian virus 40
allosteric control of DNA binding, 765

Vaccinia virus
gene encoding envelope antigen
localization and fine structure, 757
high-resolution, two-dimensional gel electrophoresis
effect of cycloheximide, 569
protein identification, 569
Varicella-zoster virus
stimulation of human T cells, 179
superinfection of transformed B cells, 179
Vero cells
African swine fever virus
effect of NH4Cl, 676
establishment and maintenance of infection, 676
Vesicular stomatitis virus
internal initiation of translation
expression of phosphoprotein mRNA, 797
mapping region of the matrix protein
binding to ribonucleocapsids, liposomes, and monoclonal antibodies, 860
temperature-sensitive G31 mutant
characterization of persistently infected cells, 493
pathogenic effect of virus-host interactions, 493
virulence in neural and nonneural cells, 493
tumorigenicity of mutant strain
expression in mice, 914
Visna virus
nucleotide sequence homology
caprine arthritis encephalitis virus, 665
tropism for sheep monocytes
effect of maturation on virus replication, 67

Woodchuck hepatitis virus
infected woodchucks
peripheral blood lymphocytes, 1

Xenotropic-related murine leukemia virus
env segments
differentiation probes, 359
